* iComfort® Communicating Thermostat required. Not furnished - Order separately.
FEATURES

WARRANTY

Compressor - Ten year limited warranty in residential installations and five years in non-residential installations.

All other covered components - Ten years in residential installations and one year in non-residential installations.

Refer to Lennox Equipment Limited Warranty certificate included with unit for specific details.

APPROVALS

AHRI Certified to AHRI Standard 210/240-2008.

Sound rated in Lennox reverberant sound test room in accordance with test conditions included in AHRI Standard 270-2008.

Tested in the Lennox Research Laboratory environmental test room.

Rated according to U.S. Department of Energy (DOE) test procedures.

Heat pumps and components within bonded for grounding to meet safety standards for servicing required by UL, NEC and CEC.

Units are ETL certified for the U.S. and Canada.

ISO 9001 Registered Manufacturing Quality System.

For expanded ratings, see www.LennoxPros.com.

ENERGY STAR® certified units are designed to use less energy, help save money on utility bills, and help protect the environment. Many Lennox home comfort systems meet ENERGY STAR requirements when used with matching components.

APPLICATIONS

2 through 5 ton.

Sound levels as low as 58 dB.

NOTE! For the latest AHRI System Matches please see the Residential Matchup Tool at www.LennoxPros.com or see the separate document AHRI Heat Pump Matches that contains all outdoor unit matches.

REFRIGERATION SYSTEM

R-410A Refrigerant

Non-chlorine, ozone friendly, R-410A.

Unit is factory pre-charged with refrigerant. Total system refrigerant charge is dependant on outdoor unit size, indoor unit size and refrigerant line length.

Refer to the unit-mounted charging sticker to determine correct amount of charge required.

See Specification table.
FEATURES

REFRIGERATION SYSTEM (continued)

1. Outdoor Coil Fan with SilentComfort™ Technology
   Specially-designed, SilentComfort™ fan guard uses Passive Vortex Suppression to reduce air noise. Constructed of corrosion-resistant PVC (polyvinyl chloride) coated steel.

2. Direct drive fan moves large air volumes uniformly through entire outdoor coil for high refrigerant cooling capacity. Vertical air discharge minimizes operating sounds and eliminates damage to lawn and shrubs. Fan service access accomplished by removal of fan guard.

3. Variable-Speed Outdoor Coil Fan Motor With Integrated Control
   Outdoor coil fan motor with integrated control is programmed for variable capacity operation. Fan speed is directly controlled by the iComfort® communications between the outdoor unit iComfort® control and the iComfort Wi-Fi® thermostat. Fan motor is inherently protected. Motor totally enclosed for maximum protection from weather, dust and corrosion.

4. Copper Tube/Enhanced Fin Coil
   Lennox designed and fabricated coil. Ripple-edged aluminum fins. Copper tube construction. Lanced fins provide maximum exposure of fin surface to air stream resulting in excellent heat transfer. Fin collars grip tubing for maximum contact area. Inverted coil circuiting prevents ice buildup at coil base in low ambient. Discharge gas enters bottom of coil during defrost and heat of refrigerant flows counter to water drainage resulting in extremely clean and unobstructed fins and tubes. Fin spacing allows rapid and complete water drainage. Flared shoulder tubing connections/silver soldering construction. Coil is factory tested under high pressure to ensure leakproof construction. Entire coil is accessible for cleaning.

5. Check/Expansion Valve - Outdoor Unit
   Designed and sized specifically for use in heat pump system. Sensing bulb is located on the suction line between reversing valve and compressor thus sensing suction temperature in the heat cycle. Factory installed and piped.
   Discharge Temperature Switch
   Shuts off unit if operating conditions cause the compressor discharge line temperature to rise above setpoint. Protects compressor from excessive pressure / temperature. Automatic reset when temperature drops below setpoint.

6. High Pressure Switch
   Shuts off unit if abnormal operating conditions cause the discharge pressure to rise above setting. Protects compressor from excessive condensing pressure. Automatic reset.

7. Low Pressure Switch
   Shuts off unit if suction pressure falls below setting. Provides loss of charge and freeze-up protection. Automatic reset.

8. Hi-Capacity Liquid Line Drier
   Factory installed in the liquid line, the drier traps moisture or dirt that could contaminate the refrigerant system. 100% molecular-sieve bead type drier.

9. Reversing Valve
   4-way interchange reversing valve effects a rapid change in direction of refrigerant flow resulting in quick changeover from cooling to heating and vice versa. Valve operates on pressure differential between outdoor unit and indoor unit of the system. Factory installed.

Optional Accessories

Check/Expansion Valve Kits
Must be ordered separately and field installed on certain indoor units. See TXV Usage table. Chatleff style fitting.

Freezestat
Installs on or near the discharge line of the evaporator or on the suction line. Senses suction line temperature and cycles the compressor off when suction line temperature falls below it’s setpoint. Opens at 29°F and closes at 58°F.

Refrigerant Line Kits
Refrigerant lines (suction & liquid) are shipped refrigeration clean. Lines are cleaned, dried, pressurized, and sealed at factory. Suction line fully insulated. L15 lines are stubbed at both ends. See Specifications table for selection. Not available for -060 model and must be field fabricated.

NOTE - The XP25 is a variable capacity heat pump utilizing variable speed compressor technology. With the variable speed compressor and variable pumping capacity, additional consideration must be given to refrigerant piping sizing and application.

Please refer to the Installation Instructions or Service Literature for Line Set Requirements and Refrigerant Piping Guidelines.
PRECISE COMFORT® TECHNOLOGY

The Variable Capacity Compressor and DC Inverter Control is an integrated system that operates together to reduce overall energy usage when compared to conventional heat pumps.

Variable Capacity Scroll Compressor

Operates on a variable frequency determined by the DC Inverter Control to vary capacity based on the heating or cooling load required.

Features high efficiency with uniform suction flow, constant discharge flow, high volumetric efficiency and quiet operation.

Consists of two involute spiral scrolls matched together to generate a series of crescent shaped gas pockets between them.

During compression, one scroll remains stationary while the other scroll orbits around it.

Gas is drawn into the outer pocket, the pocket is sealed as the scroll rotates.

As the spiral movement continues, gas pockets are pushed to the center of the scrolls. Volume between the pockets is simultaneously reduced. When the pocket reaches the center, gas is now at high pressure and is forced out of a port located in the center of the fixed scrolls.

During compression, several pockets are compressed simultaneously resulting in a smooth continuous compression cycle. Continuous flank contact, maintained by centrifugal force, minimizes gas leakage and maximizes efficiency.

Compressor is tolerant to the effects of slugging and contaminants. If this occurs, scrolls separate, allowing liquid or contaminants to to be worked toward the center and discharged.

Top Cap Thermal Sensor Switch

Located on top of the compressor casing.

Discontinues compressor operation in case of abnormal operating conditions.

Compressor Sound Dampening System

A polyethylene compressor cover containing a 2 inch thick batt of fiberglass insulation for better sound dampening.

All open edges are sealed with a one-inch wide hook and loop fastening tape.

DC Inverter Control

Converts AC line voltage into filtered variable DC voltage.

Provides continuous compressor operation, while adjusting the capacity according to indoor temperature.

Adjusts compressor output in increments as small as 1%.

The accurate sensing of cooling or heating loads prevents frequent changes in capacity and ensures efficient, economical operation.

Noise filter reduces unwanted electromagnetic interference (EMI). Integrated on the control for 024 and 036 models, external to the control for 048 and 060 models.

Power Factor Correction (PFC) circuit monitors the DC bus for high, low and abnormal voltage conditions to protect the compressor.

Two LEDS (red and green) indicate inverter operating status and aid in troubleshooting.

The inverter reactor (mounted separately) adds inductance to the line between the inverter and the compressor to limit current rise and protect the compressor.

iComfort® Communicating Control

Advanced control communicates information about various operating parameters in the air conditioner to the iComfort® Communicating to constantly maintain the highest level of comfort, performance and efficiency available.

Auto Configuration - On start-up the control automatically sends a description of the unit to the iComfort® Communicating Thermostat to automatically configure the features available.

Control also features:

- Seven-Segment Display shows information about outdoor unit type and capacity and also displays alerts for common fault conditions (electrical and mechanical).
- Low voltage protection prevents compressor operation when voltage is not within the specified range.
- Compressor defrost shift delay - Adjustable 0 (factory) or 30 seconds.
- Demand defrost using outdoor ambient air temperature, coil temperature and compressor runtime inputs. 14 minute maximum defrost time.
CONTROLS (continued)

Comfort® Control (continued)

• Selectable defrost termination temperature - 50, 70, 90 or 100°F. Default setting is 50°F.
• High and low pressure switch monitoring with provisions for lockout.
• Five-Strike lockout protection protects compressor.
• Discharge line temperature and outdoor air temperature monitoring.
• EEPROM storage of all local configurations.
• Non-volatile memory storage of 100 alarm codes with display of last 10 codes for troubleshooting.
• Built-in low ambient control.

Low Ambient Operation

Cooling Mode - The heat pump can operate down to 0°F outdoor air temperature in the cooling mode.
NOTE - A freezestat is recommended for extra protection during low ambient cooling operation.

Heating Mode (Low Temperature Protection) - Outdoor unit will not operate in the heating mode when the outdoor temperature is at or below –4°F. If the unit is operating and the outdoor temperature drops below –4°F, the unit will continue to operate until the room thermostat is satisfied or the outdoor temperature drops to –15°F.

Climate IQ™ Technology
Optimizes dehumidification settings for specific climates to improve home comfort during cooling or heating operation.

iComfort Wi-Fi® Thermostat Settings:

Cooling Mode
Three climate settings are available:
• Dry - The system supplies higher indoor airflow at all compressor capacities, increasing efficiency by operating at a higher sensible to total ratio.
• Moderate - The system supplies indoor airflow that balances efficiency and comfort.
• Humid - The system supplies lower indoor airflow at all compressor capacities, improving humidity removal by operating at a lower sensible to total ratio.

Heating Mode
Two climate settings are available:
• Comfort - The system reduces indoor airflow, increasing supply air temperature.
• Normal - Standard system operation.

iComfort® S30 Thermostat Setting:
• Climate IQ (Auto) - Dry, Normal, Basic and Humid modes are automatically set based on the difference between the measured relative humidity and the relative humidity setting.
All modes are selected on the iComfort® Communicating Thermostat.

Outdoor Air Temperature Sensor
Used with iComfort® Communicating Thermostats.

Sensor allows thermostat to display outdoor temperature. Sensor is auto-detected when connected to thermostat.

REQUIRED COMPONENTS

NOTE - The XP25 heat pump can only be used with an iComfort® Communicating Thermostat.

iComfort® S30 Ultra-Smart Thermostat (part of the iComfort® Residential Communicating Control System)
The iComfort® S30 Thermostat recognizes and connects to all iComfort® Communicating products to automatically configure and control the heating/cooling system (based on user-specified settings) for the highest level of comfort, performance and efficiency. Also recognizes model and serial number information for iComfort® Communicating products to simplify system setup.

Wi-Fi remote temperature monitoring and adjustment through a home wireless network for desktop PCs, laptops and apps for smartphones or tablets. Also displays service alerts and reminders.

Dealer Dashboard features online real-time monitoring of installed iComfort® Communicating systems.

A simple easy-to-use touchscreen allows complete system configuration. Scheduled maintenance alerts, system warnings and troubleshooting are also displayed on thermostat screen.

Apple HomeKit™ compatible. Control the S30 thermostat from an iPhone, iPad or iPod device and use Siri® voice commands.

Amazon® Alexa-enabled, smart-home-compatible. Works with Amazon Echo, Echo Dot and Tap devices.

Easy to read 7 in. high definition color display (measured diagonally).

Installer setup screens allow quick and simple system configuration without a manual, Installer can also run tests on complete system or individual components for easy maintenance and troubleshooting.

Serial communications bus (RSBus), with less wiring than a conventional heating/cooling system, allows system communication. Uses 4-wire, 18-gauge standard thermostat wiring.

Remote outdoor temperature sensor (furnished with outdoor unit) allows the thermostat to display outdoor temperature. Required in dual-fuel and applications.

High Definition Color Display, Mag-Mount, Smart Hub Controller, wallplate (for retrofit installations) furnished for easy installation.

See the iComfort® S30 Thermostat Product Specifications bulletin in the Controls section for more information.

**CABINET**

- Heavy-gauge steel construction
- Pre-painted cabinet finish.
- Compressor and control box located in a separate compartment, insulated with thick fiberglass insulation.
- Compartment provides protection from the weather and keeps sound transmission at a minimum.
- Control box is conveniently located with all controls factory wired.
- Large removable panel provides service access.
- Drainage holes are provided in base section for moisture removal.
- High density polyethylene unit support feet raise the unit off of the mounting surface, away from damaging moisture.

**PermaGuard™ Unit Base**

- Durable zinc-coated base section resists rust and corrosion.

**SmartHinge™ Louvered Coil Protection**

- Steel louvered panels provide complete coil protection.
- Panels are hinged to allow easy cleaning and servicing of coils.
- Panels may be completely removed.
- Interlocking tabs and slots assure tight fit on cabinet.

**Refrigerant Line Connections, Electrical Inlets and Service Valves**

- Vapor and liquid lines are located on corner of unit cabinet and are made with sweat connections. See dimension drawing.
- Fully serviceable brass service valves prevent corrosion and provide access to refrigerant system. Vapor valve can be fully shut off, while liquid valve may be front seated to manage refrigerant charge while servicing system.
- Vapor and liquid line service valves and gauge ports are located inside the cabinet.
- Refrigerant line connections and field wiring ports are located in one central area of the cabinet. See dimension drawing.

**Optional Accessories**

**Snow Guard**

- For use in locations where the possibility of heavy snow or freezing rain accumulation may occur.
- Heavy gauge powder coated steel guard deflects snow and ice away from the outdoor fan and prevents buildup on the fan guard.

### REQUIRED COMPONENTS - ORDER SEPARATELY

- **iComfort** S30 Thermostat: 12U67
- **iComfort Wi-Fi** Thermostat: 10F81
- **Discharge Temperature Sensor**: 88K38

### OPTIONAL ACCESSORIES - ORDER SEPARATELY

- **Freezestat**: 3/8 in. tubing 93G35, 5/8 in. tubing 50A93
- **Snow Guard**: 40 x 36 in. X8782
- **Field Fabricate**

**NOTE** - Extremes of operating range are plus 10% and minus 5% of line voltage.

1. Refrigerant charge sufficient for 15 ft. length of refrigerant lines. For longer line set requirements see the Installation Instructions for information about line set length and additional refrigerant charge required.

2. HACR type breaker or fuse.

3. Refer to National or Canadian Electrical Code manual to determine wire, fuse and disconnect size requirements.

4. Used with the iComfort Communicating Thermostats for optional service diagnostics.

5. Freezestat is recommended for Low Ambient operation.

6. Refer to the Installation Instructions or Service Literature for Line Set Requirements and Refrigerant Piping Guidelines.

7. Adds 11-1/2 inches (292 mm) to unit height,

**NOTE** - the octave sound power data does not include tonal correction.

1 Tested according to AHRI Standard 270-2008 test conditions. "SRN" is the overall A-Weighted Sound Power Level, (LWA), dB (100 Hz to 10,000 Hz).

2 Estimated sound pressure level at distance based on AHRI Standard 275-2010 method for equipment located on the ground, roof, or on side of building wall with no adjacent reflective surface within 9.8 feet. Sound pressure levels will increase based on changes to assumptions. For other applications, refer to AHRI Standard 275.

### INSTALLATION CLEARANCES - INCHES (MM)

**NOTES** -

One of these three sides must be 36 in. (914 mm).
One of the two remaining sides may be 12 in. (305 mm).
The remaining side may be 6 in. (152 mm).

Service Clearance - 30 in. (762 mm)

48 in. (1219 mm) clearance required on top of unit
24 in. (610 mm) required between two units

### FIELD WIRING

A - Two Wire Power (see Electrical Data)
B - Two or Three Wire Power (size to heater capacity)
C - Four Wire Low Voltage RSBus (not furnished) 18 ga. minimum
D - Four Wire Low Voltage RSBus (not furnished) 18 ga. minimum

**NOTE** - Field Wiring Not Furnished
All wiring must conform to NEC or CEC and local electrical codes.
**TXV USAGE**

Use this table for C35, CH23, CH33, CH35 and CR33 Field Installed TXV Match-Ups.

CX34, CX35 and CX38 upflow coils and all Lennox air handlers are shipped with a factory installed check/expansion valve. In most cases, no change out of the valve is needed.

C35 and CH33/CH35 coils - Replace the factory installed orifice with the expansion valve listed.

CR33 and CH23 - Use the expansion valve listed.

**AHRI STANDARD 210/240**

Cooling or heating capacities are net values, including the effects of blower motor heat, and do not include supplementary heat. Power input is the total power input to the compressor(s) and fan(s), plus any controls and other items required as part of the system for normal operation.

Units which do not have an indoor air-circulating blower furnished as part of the model, i.e., split system with indoor coil only, is established by subtracting from the total cooling capacity 1250 Btu/h per 1,000 cfm, and by adding the same amount to the heating capacity. Total power input for both heating and cooling is increased by 365 W per 1,000 cfm of indoor air circulated.
